eer

loft project development
renovation and extension

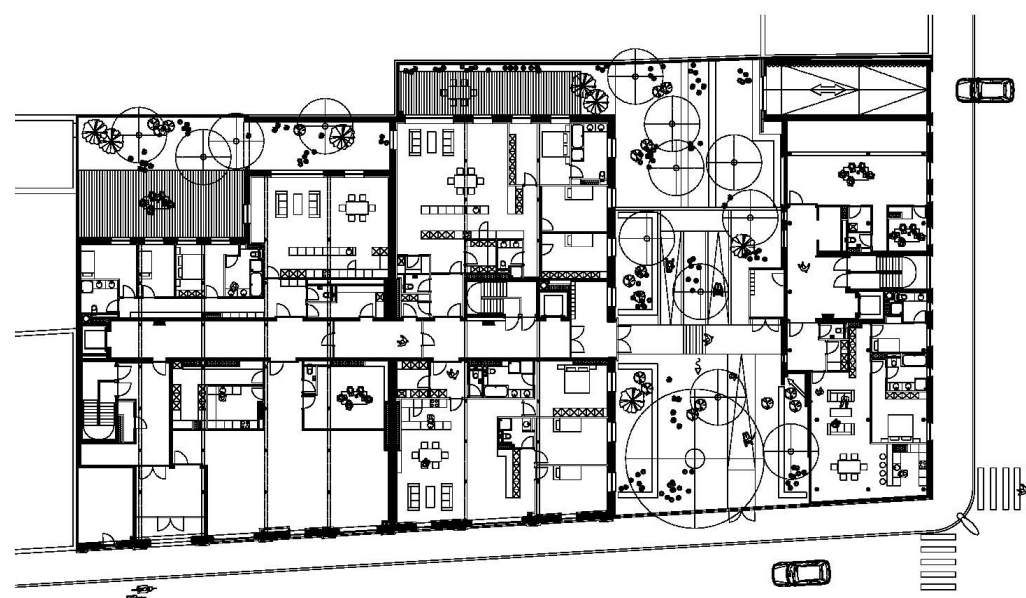

toussaint

project: eer is the design architect of this project development in brussels. the project has two major urban elements:

renovation: within the existing brick structure of the brewery loft schemes are integrated in full respect of the historical values.

innovation: on the corner of the site a new structure is erected whereby the living areas with large windows are facing the inner garden. in contrast the facade towards the street is more closed. like a giant barcode the project is defining a new urban language
