carrières du hainaut exhibition stand

project: the exposition stand for the largest european manufacturer of natural stone is completely made out of perforated and folded metal plate. this material is placed in sharp contrast with the exposed stones. general lighting is made out of extreme large halogene bulbs, dimmed to a maximum, obtaining a warm glow, almost as a candle.

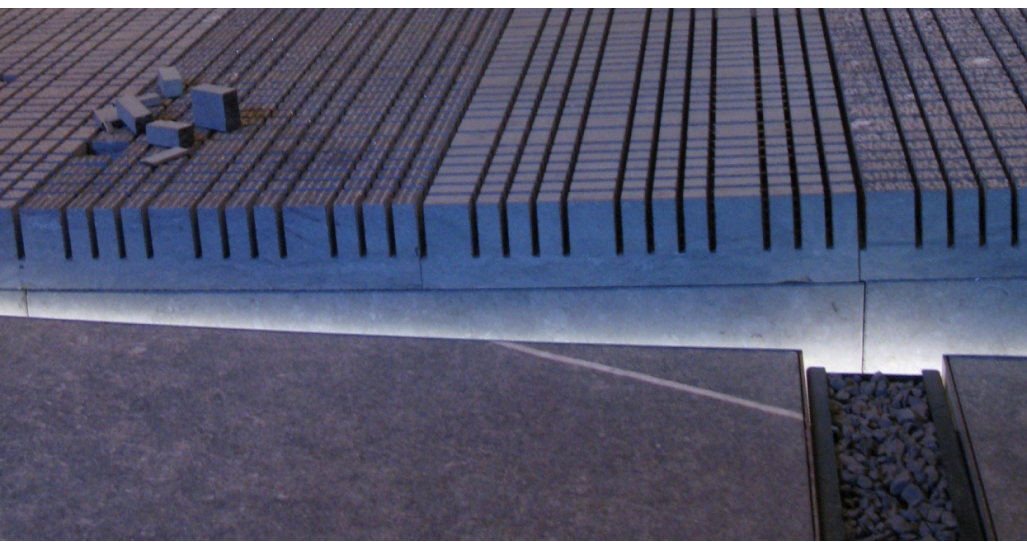

carrieres du hainaut

exhibition: in addition to the warm general lighting we choose for a dynamic electrical blue light placed on some random materials in order to create an attractive and popular venue
